

① Monolithic Architecture

② Microservice Architecture

Monolith

- ① Simple to start
- ② complex - delayed deployed.
- ③ One common codebase
- ④ Tightly coupled more often

Microservice

- ① More operational complexity.
- ② easily deployable
- ③ micro - components for each feature
- ④ loosely coupled,

DevOps

Dev + Ops

Tools in DevOps

① Git & GitHub

② Docker

③ Python → Go

④ Linux — heart of devops

⑤ Networking. — TCP, UDP, OSI
layer,

⑥ CI CD — Continuous Integration & Deployment

CD — Continuous deployment —
CD = Continuous Delivery. — manual approval.

⑦ cloud :- AWS, Azure,
Oracle, CCP

⑧ Kubernetes - K8S - pod, replicaset,

⑨ Terraform :- Infra provisioner stateful, volume.

⑩ Ansible :-

⑪ monitoring :- Grafana - Dashboard
Prometheus -

⑫ GitOps :-

⑬ SecOps :- Dev Sec Ops

★ Trivy :-

→ Scan the Docker Image

Devops Lifecycle

① Plan → Code → Build → Test

Deploy ← Release

→ Operate → Monitor.

Job Roles

- ① DevOps Engineer
- ② DevSecOps Engineer
- ③ Platform Engineer

470E

④ SRE	Site Reliability engineers
-------	-------------------------------

5) Cloud Engineers

6) Solution Architect - 5 yoe

7) AIops Engineers.

8) MLops engineers

9) AI Cloud Engineers

① To build "College Placement Application" which type of Architecture you will use?

① Monolith

② Microservice
